

Werk II - Dedicated with Magic and Entertainment

The formal dedication of Hempel Legierungsmetall's new smelting and warehouse buildings in Oberhausen was celebrated under splendid autumn skies. Over 100 guests from all over the world enjoyed a magic show, a stilt walker in a glow costume, technology tours, a photo exhibition and excellent live music. Now the world's most advanced smelting plant, with its own energy management system, can be put into operation.

The modern induction billet oven supports a broader and deeper portfolio of materials.

Energy efficiency, environmental protection and working conditions have the highest priority.

This is how Hempel Legierungsmetall will create new jobs.
